

## MONDOFLEX

Indoor Multi Purpose  
Mondoflex 3mm Installed with Everlay B or EG for multigame use  
Range of colours available

Multi-purpose Point Elastic sports flooring consisting of two layers of natural and synthetic rubber and an elastic foam supporting underlay. The calendered and vulcanised layers are joined during the production and form Mondoflex II.

## Surface layer with a smooth, non slip and anti-reflective finish.

The three-layered structure gives the flooring modulated density and hardness to ensure

- correct loads distribution
- energy return
- shock absorption produced during sports activities

The floor can be glued directly on a suitable subsurface or installed to the stabilising underlay Everlay with a suitable adhesive.

### **Shock absorption level >25%**

Mondoflex II, ensures a shock absorption level of greater than 25%. MONDOFLEX 3mm in combination with EVERLAY EG has a >30% rating

### **Durability**

The vulcanisation process of the rubber gives the flooring a life expectancy of over 15 years, under normal use and maintenance conditions

### **Timeless biomechanical properties**

The vulcanising process of the rubber is clearly superior to other materials and allows to maintain the biomechanical qualities of the flooring longer

### **Mondoflex II + Everlay = Waterproof coupling**

Mondoflex II can be combined to the waterproofing underlayment Everlay during installation that is dry laid on a suitable subsurface. The combination is effective against moisture problems and construction joint movement.

### **Eco-compatibility**

The Mondoflex II Environmental Product declaration (EPD) for the LCA analysis was implemented in January 2013: tests showed that it is 19% less impacting on the environment. The Mondoflex II rubber material is considered solid urban waste and therefore easily disposable in a normal landfill. Tests carried out at

**No heat welding joints, longer lasting**  
Under standard conditions the floor does not need weld joints, for a better finish

independent laboratories have shown that Mondoflex II has a remarkably low level of VOC emissions into the air.

Compliant with ISO 14040 and ISO 14044 certifications.
